Executive Summary - (comes first and is written last)

1. **Problem Statement -**

   Dell SupportAssist for Business PCs is experiencing product escalations that increase support effort, extend issue-resolution time, and negatively impact the overall customer and support experience. Addressing the key drivers of these escalations is the immediate priority.

   Once product escalations are reduced and the support experience is improved, the next focus will be increasing adoption of SupportAssist for Business PCs by identifying and addressing the barriers that prevent eligible customers from successfully deploying, connecting, and using the product.

2. **Goals and what are my non-goals -**
   a. Goals
      i. Reduce customer product escalations.
      ii. Increase in product adoption (means: deployment, connectivity, active usage, or successful onboarding)
      iii. Improve the onboarding experience and reduce user confusion during product setup and adoption.
   b. Non-goals
      i. Introducing or building a new standalone application is out of scope.
      ii. Not focusing on video creation at this point
3. Success Matric
   a. **North Star** → Escalation rate ↓
   b. **L1** → Adoption rate ↑ + incidents/user ↓
   c. **Counter** → Task drop-off should not increase + D30 retention should not decrease
4. **User Journey - Empathy Map**

5. What is the competitor offering

6. **RICE** -inspired prioritization

Opportunity	Reach	Impact	Confidence	Effort	Priority

Guided Adoption Hub	**MED**	**HIGH**	**HIGH**	**HIGH**	**P0**
Actionable Support Insights	**MED**	**MED**	**HIGH**	**MED**	**P1**
Value Visibility Dashboard	**MED**	**MED**	**MED**	**HIGH**	**P2**

Opportunity	**Reach**	**Impact**	**Confidence**	**Effort**	**Priority**
Actionable Support Insights	500	3.0	80%	3	**P0**
Guided Adoption Hub	700	2.0	75%	5	**P1**
Value Visibility Dashboard	350	1.0	60%	4	**P2**

7. **FUNCTIONAL AND ACCEPTANCE CRITERIA / NON-FUCTIONAL REQUIREMENTS**
    a. **Functional -** Customer should not face any technical issues related to the product during onboarding, so it could increase product adoption
    b. **Non-Functional requirements -**
        i. **P - performance** - Inquiry-type issues should be resolvable by L1/L2 without product escalation.
        ii. **Q - Quality** - Escalated cases should contain required diagnostics, context, and troubleshooting evidence.
        iii. **R - Reliability** - Onboarding should complete consistently without avoidable failures.
        iv. **S - Secure** - Customer data, credentials, and configuration details must remain protected during onboarding.
        v. **T - Transparency** - Prerequisites, dependencies, permissions, and blockers must be visible before onboarding starts.
        vi. **U - Usability** - Admins should clearly understand onboarding progress, blockers, and next actions.
8.
